

Group III. claims 29-33, drawn to assay kits containing antibodies for Type IV cPLA2.

Responsive to the Requirement for restriction, Applicants elect to prosecute the invention of Group I, with traverse, Claims 1-26, which are drawn to methods of assaying for type IV cPLA2.

Applicants respectfully request reconsideration of the Requirement for Restriction, or in the alternative, modification of the Restriction Requirement to allow prosecution of more than one group of Claims designated by the Examiner in the present Application, for the reasons provided as follows.

Under 35 U.S.C. §121 "two or more independent and distinct inventions ... in one Application may ... be restricted to one of the inventions." Inventions are "'independent'" if "there is no disclosed relationship between the two or more subjects disclosed" (MPEP 802.01). The term "'distinct'" means that "two or more subjects as disclosed are related ... but are capable of separate manufacture, use or sale as claimed, AND ARE PATENTABLE OVER EACH OTHER" (MPEP 802.01) (emphasis in original). However, even with patentably distinct inventions, restriction is not required unless one of the following reasons appear (MPEP 808.02):

1. Separate classification
2. Separate status in the art; or
3. Different field of search.

Further, under Patent Office Examining Procedures, "[i]f the Search and Examination of an entire Application can be made without serious burden, the Examiner must examine it on the merits, even though it includes claims to distinct or independent inventions" (MPEP 803, Rev. 8, May 1988) (emphasis added).

Applicants respectfully submit that the groups designated by the Examiner fail to define compositions and methods, with properties so distinct as to warrant separate Examination and Search. Claims 27-28 of Group II are drawn to Proteins immunologically homologous to Type IV cPLA2 and Claims 29-33 of Group III are drawn to assay kits containing antibodies for Type IV cPLA2 that are fundamentally related to Claims 1-26 of Group I, drawn to methods of assaying for type IV cPLA2. The search for any of the methods separately classified by the Examiner as the

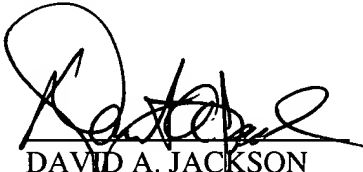

invention of Group I, would encompass a search of the identical classes wherein the proteins of Group II and/or the kits of Group III are classified, thus resulting in a duplicate search for the same material. Thus, Applicants submit that the Search and Examination of the entire Application, or, at least, of the kits Group III with the methods Group I can be made without serious burden, and therefore the Examiner should examine all of the claims of the Application on the merits.

The Examiner's assertions to the contrary notwithstanding, Applicants respectfully submit that conjoint examination and inclusion of all of the Claims of the present Application would not present an undue burden on the Examiner. Accordingly, withdrawal of the Requirement for Restriction is in order, and is requested.

No fees are believed to be necessitated by the foregoing Response. However, should this be erroneous, authorization is hereby given to charge Deposit Account No. 11-1153 for any underpayment, or credit any overages.

In view of the above, withdrawal of the Requirement for the Restriction is requested, and an early action on the merits of the Claims is courteously solicited.

Respectfully submitted,

DAVID A. JACKSON
Attorney for Applicant(s)
